1. Introduction

This document has been compiled with the aim of providing members of the Benchmark Retirement Fund with an overview of the investment options offered to enable them to make informed decisions regarding the investment of their retirement assets.

The following portfolios are offered to members:

Investment Portfolio	Risk Categorisation	Asset Manager's Explicit Performance Objective (Before Fees)	Return Expectations derived from Historical Experience (Before Fees)
AF Namibia Balanced Growth Fund	Moderate	None	CPI + 5% to 6%
Allan Gray Namibia Investment Trust	Moderate	None	CPI + 5% to 6%
Investec Managed Fund Namibia	Moderate	None	CPI + 5% to 6%
Old Mutual Namibia Profile Pinnacle Fund	Moderate	None	CPI + 5% to 6%
Prudential Namibia Balanced Fund	Moderate	None	CPI + 5% to 6%
Sanlam Namibia Balanced Fund ²	Moderate	None	CPI + 5% to 6%
Standard Bank Namibia Managed Fund	Moderate	None	CPI + 5% to 6%
Default Portfolio	Moderate-Low	-	CPI + 4% to 5%
NAM Coronation Capital Plus Fund	Moderate-Low	CPI + 4% (1yr)	CPI + 4%
Prudential Namibia Inflation Plus Fund	Moderate-Low	CPI + 4%	CPI + 4%
NAM Coronation Balanced Defensive Fund	Moderate-Low	IJG Money Market + 3%	CPI + 2% to 3%
Sanlam Namibia Active Fund ¹	Low	1-3 year ALBI	CPI + 1% to 2%
Money Market Fund	Capital Preservation	7-day repo rate	CPI to CPI + 1%

1. The Trustees of the Fund have decided to replace the Investec High Income Fund with the Sanlam Namibia Active Fund.

2. The Sanlam Namibia Managed Prudential Fund was renamed to Sanlam Namibia Balanced Fund with effect from 1 October 2012

Investment Returns

In order to achieve an adequate salary replacement ratio it is imperative that members achieve a real investment return, i.e. a return in excess of price inflation. Refer to Annexure A for an indication of the relationship between investment returns and the salary replacement ratio.

While a real investment return should ideally be set as the explicit performance objective of an investment portfolio, a number of investment portfolios, that are suitable for retirement funds, do not have an explicit performance objective related to inflation. The member will therefore have to consider the historic performance experience of an investment portfolio in relation to inflation as a proxy of potential returns in order to link a specific investment portfolio to the salary replacement ratio. It must be noted that the historic performance experience is not guaranteed to be achieved in future. While each investment portfolio will have an internal benchmark as stated by the Investment Manager in the portfolio mandate, that benchmark may not be an explicit real investment return.

Risk

The risk rating of an investment portfolio gives an indication of how volatile investment returns may be and therefore is also an indication of the risk that the investment return per the investment mandate may not be achieved. The risk categories have the following meaning:

- **Aggressive risk portfolios:** Short term negative returns are possible with this type of portfolio. Exposure to equities (shares) is normally maximised for these types of portfolios in order to achieve the return objective. Maximisation of equity exposure however takes place within the prudential investment guidelines laid down by the Pension Funds Act. Investment returns can be very volatile.
- **Moderate risk portfolios:** This type of portfolio will have large exposure to growth assets (shares and property) at times and as such short term negative returns are possible. Investment returns can be volatile.
- **Moderate-low risk portfolios:** This type of portfolio also has exposure to growth assets (shares and property) but typically at lower levels than the moderate risk portfolios. They aim to have minimal negative returns and therefore have a lower risk profile than the moderate risk portfolios. Investment returns can still be volatile.
- **Low risk portfolios:** This type of portfolio should have minimal negative returns over a rolling 12-month period.
- **Capital preservation portfolios:** There should be no risk of capital loss on a monthly basis.

Investment return and risk are correlated; while the correlation cannot be defined in absolute terms, it is generally accepted that an investor would require compensation in the form of investment returns in return for the investment risk taken.

The Trustees do not currently offer aggressive risk portfolios, but will make them available when suitable portfolios have been identified.

All portfolios are compliant with the prudential investment guidelines of Regulation 28 of the Pension Funds Act.

2. Market Overview

2.1 Long Term Market Performance

The following graph represents the cumulative performance of some market indices for the period **31 December 1999 to 30 September 2013**.

2.2 Medium Term Market Performance

The following table presents the performance of various market indices to **30 September 2013**.

	2010	2011	2012	2013 YTD	One Year	Three Years
All Share (SA)	19.0%	2.6%	26.7%	15.1%	27.0%	17.8%
JSE: Financials	16.5%	7.4%	38.1%	11.4%	22.5%	18.2%
JSE: Industrial	27.4%	9.2%	40.8%	26.5%	42.2%	28.0%
JSE: Resources	12.3%	-6.5%	3.1%	-0.7%	6.5%	3.7%
All Bond (SA)	15.0%	8.8%	16.0%	0.5%	3.1%	8.5%
STeFI (SA)	6.9%	5.7%	5.5%	3.8%	5.2%	5.6%
MSCI World	0.5%	15.8%	21.3%	40.6%	46.0%	27.0%
JP Morgan Bond	-4.8%	30.7%	5.4%	13.1%	12.3%	13.4%
Rand/Dollar ¹	-10.6%	21.9%	4.1%	19.4%	20.7%	13.0%
CPI (SA)	3.5%	6.1%	5.7%	4.8%	6.0%	5.7%

1. A positive percentage indicates a depreciation of the Rand relative to the Dollar, and vice versa.

2.3 Short Term Market Performance

The following graphs represent the monthly performance of various market indices for the year ending **30 September 2013**.

2.3.1 South Africa

2.3.2 World

2.3.3 South African and International Market Commentary

The US Government was placed under partial shutdown for the first time in 17 years during September due to Congress not agreeing the 2014 budget. The major controversial issue relates to the proposed healthcare reform. Approximately 700 000 federal employees were affected by the shutdown resulting in an estimated daily cost of around US\$ 160 million. Whilst America faces political disagreements, the Eurozone showed positive signs of recovery with PMI during September at 52.1 signifying growth within the Union.

With the government lockdown in America, investor sentiment once again favoured emerging markets such as South Africa, irrespective of the ongoing labour problems within the car manufacturing, textile, construction, electricity, and mining sectors.

The Gold Price and Brent Crude oil weakened in Rand terms for September 2013, returning -6.7% and -5.7% respectively.

Equities

The one year forward price earnings ratio on the FTSE/JSE All Share Index has risen to 14.1 times, while the one year forward dividend yield has fallen to 3.4%, generating concerns regarding the downside risk in domestic equity markets. Although listed property outperformed equities in September, year-to-date equities have outperformed listed property by nearly 8%.

Bonds

The All Bond Index advanced 3.9% in September while the JP Morgan Global Emerging Market Bond Index (EMBI) has tumbled more than 11% year-to-date as higher yields in developed markets dampened the global search for yield which had been fuelling capital inflows into EM economies.

Currency

The average Rand/US Dollar exchange rate for the period strengthened to R10.03 compared to R10.27 during August. The Rand however weakened against the GBP closing at R16.27

2.4 Namibia

2.4.1 Long Term Market Performance

The following graph represents the cumulative performance of some market indices for the period **30 June 2002 to 30 September 2013**.

2.4.2 Medium Term Market Performance

The following table presents the performance of various market indices to **30 September 2013**.

	2010	2011	2012	2013 YTD	One Year	Three Years
NAM Total	14.8%	-0.6%	21.2%	3.1%	14.4%	10.5%
NAM Local	18.7%	36.7%	31.2%	20.7%	34.8%	31.4%
NAM CPI	3.1%	7.2%	6.3%	4.1%	5.5%	5.8%
IJG Bond Index ¹	13.9%	7.1%	15.4%	3.1%	5.7%	8.7%
IJG Money Market	7.1%	6.0%	5.7%	4.0%	5.4%	5.8%

1. The historical performance of the IJG Bond Index has been revised to include Namibian Corporate bonds.

2.4.3 Short Term Market Performance

The following graph represents the monthly performance of various market indices for the year ending **30 September 2013**.

2.4.4 Namibian Market Commentary

The Namibian Stock Exchange gained 13.9% for the quarter ended September 2013 compared to the loss of 8.8% for the quarter ended June 2013. The NSX local index continued on its impressive growth path, ending the month 25% higher than in the same period last year. The export index moved up slightly from August 2013 by 0,6 index points with fish and red meat prices reflecting modest improvements. Metal exporters struggled with copper prices falling 9% since the same period last year, whilst uranium prices are down 30%. Namibia ranked 26th of the fastest-growing markets according to the Global Retail Development research of 2013, with a 45.9 GRDI score which motivated a strong consumer spending growth, political stability, and a business-friendly environment. The IJG Business climate index gained 8,4 index points due to strong growth in building plans passed, South African developer Atterbury has announced plans to develop the largest mall in Namibia to open during September 2014.

Namibian CPI was 1.4% for the third quarter of 2013, keeping annual inflation at 5.5% which is below the expected range between 6.0% and 7.0%.

The repo and prime rate is unchanged at 5.5% and 9.25% respectively.

3. Performance Comparison as at 30 September 2013

3.1 Moderate Portfolios

3.1.1 Asset Allocation

The figures below reflect the asset allocation of the moderate portfolios as at **30 September 2012 (12 Months ago)**

3.1.2 Change in Asset Allocation

The following graph illustrates the changes that were made to the managers' asset allocation over the 12 month period ending **30 September 2013**. In the event that the allocation to an asset class was decreased, the change would be indicated on the left hand side of the vertical axis.

The above graph indicates that Prudential, Sanlam, Standard Bank and OMIGNAM have made significant changes to some of their underlying asset classes. Prudential reduced the portfolio's underlying exposure to Nam Cash whilst increasing exposure to SA Equities and Nam Equities. OMIGNAM decreased exposure to NAM Bonds and SA Equities significantly while increasing Namibian cash assets. Furthermore Sanlam decreased their exposure to NAM Bonds and SA Equities and increased their exposure to offshore assets. Standard Bank significantly increased their NAM Cash and international exposure whilst decreasing their Namibian Equity and bond Exposure.

3.1.3 Geographical Split as at 30 September 2013

	Allan Gray	Investec Managed	AF Balanced Growth	OMIGNAM Balanced	Prudential Balanced	Sanlam Namibia Balanced	Standard Bank Managed
Namibia	38.3%	46.6%	39.4%	38.2%	35.8%	38.6%	40.1%

Benchmark Retirement Fund Default Portfolio

Risk Profile: Moderate-low

Size: N\$ 353m

Inception: Aug-99

Portfolio Description

The Default Portfolio has the following objectives:

- To reduce volatility of returns
- To achieve a real return of 4% (net of fees) over a rolling 3 year period
- To reduce risk of large negative returns over rolling 12 months
- To reduce risk by spreading assets between more than one investment manager

The Default Portfolio has a risk profile lower than that of the moderate risk portfolios and as such the expected long term returns should also be lower. The Trustees use their absolute discretion in selecting the best manager offering and reserve the right to appoint or replace Asset Managers at any time.

Benchmark

The benchmark for this fund is Namibian Headline inflation +5% over a rolling three year period.

Fees: 0.75%p.a.

Portfolio Mix as at 30 September 2013

Allan Gray Namibia Investment Trust
Prudential Namibia Inflation Plus

For the period from January 2004 to July 2007 the Default portfolio assets were invested 100% in the Metropolitan Absolute Return Fund. As from July 2007 the Trustees decided to add the Prudential Namibia Inflation Plus Fund to the default portfolio. It was decided to replace the Metropolitan Absolute Return Fund with the Allan Gray Namibia Investment Trust as from 1 January 2011. Cash Flows would be split equally between the two portfolios.

5. Glossary

Asset Allocation: The weighting of assets in an investment portfolio amongst different asset classes (shares, bonds, property, cash, and international investments).

BEASSA All Bond Index (ALBI): Bond Exchange Actuarial Society of South Africa Index.

Balanced Fund: An investment portfolio that spreads its holdings over a range of asset classes, which typically include shares, fixed interest, property, international securities, and cash.

Benchmark: An index or other market measurement that is used by a fund manager as a yardstick to assess the risk and performance of a portfolio; for example, the All Share Index is a commonly used benchmark for Domestic Equity portfolios.

Bottom-up Analysis: A form of security analysis that begins with forecasting returns for individual companies, then moves to industries and, finally, the economy as a whole.

Capital Preservation Portfolio: Portfolios that provide investors with a 100% Capital Guarantee (i.e. initial investments + contributions + percentage of bonuses received).

FTSE/JSE All Share Index (ALSI): A “basket” of shares representing all the shares on the JSE. This index is used as a measurement to indicate price movements in the market.

Growth Style: Growth style managers identify companies with above average earnings growth, which they believe will be reflected by the price in future. These shares usually have a higher P/E ratio as the price is higher due to earnings being generated at a fast pace.

Growth at a Reasonable Price: An investment style in which the manager selects shares where the company is growing profits, but the share price is not over-priced relative to that growth or shares of which the P/E ratio is below that of the index.

Inflation (CPI): The consumer price index represents the increase in the price of a “basket” of basic goods and services e.g. food, petrol. It provides an indication as to how fast prices are increasing in the economy.

Institutional Investor: An organisation whose primary purpose in investment markets is to invest its own assets or those that it holds in trust for others. Institutional investors include fund managers, life companies, retirement funds, banks, etc.

JMCA: An abbreviation for Jacques Malan Consultants and Actuaries.

JP Morgan Global Bond Index: An index which can be used to measure global bond market movements. Countries’ bonds across the globe form part of the index, each carrying a certain weight in the index.

Market Value Adjustment: A term used with smooth bonus products. All disinvestments which are not for benefit payment (ie switches, terminations) will be paid out at the lower of book or market value. Genuine benefit payments are defined to be payments iro resignation, death and retirement.

Median: The middle value that exceeds half of the values in the sample and which is exceeded by the other half. For example, if five items cost R20, R80, R100, R300, and R500 respectively, the median value would be R100, whereas the mean would be R200.

MSCI World Equity Index: An index which can be used to measure global market movements. Countries across the globe form part of the index, each carrying a certain weight in the index.

NSX Index: A “basket” of shares representing all the shares on the Namibian Stock Exchange. This index is used as a measurement to indicate price movements in the market.

Price Earnings Ratio: A stock's market price divided by its current or estimated future earnings per share. The PE ratio is used by the investing public as a measure of the attractiveness of a particular share versus all other shares. The lower the ratio relative to the average of the share market, the lower the market's profit growth expectations.

Prudential Unit Trust: A unit trust which complies with Regulation 28 of the Pension Fund Act.

Regulation 28: The regulation in the Pension Fund Act providing guidelines for the investments of retirement funds.

Strategic Asset Allocation: The composition of an asset mix within a portfolio, constructed with the aim of meeting the long-term objectives of a fund, rather than being based on short-term views of relative performance of the various asset classes. Usually a benchmark is derived in this fashion.

STeFI: Short Term Fixed Interest Index. An index used to measure performance for short term (cash) investments.

Top Decile: A statistical measure dividing a sample into ten numerically equal groups. Thus, ‘top decile’ means the top 10% of a given sample.

Top-Down Analysis: A form of security analysis that begins with forecasting broad macroeconomic trends, then assessing the impact on industries and, finally, on individual companies.

Tactical Asset Allocation: A process by which the asset allocation of a fund is changed on a short-term basis to take advantage of perceived differences in relative values of the various asset classes. TAA can also be described as the variation of asset allocation around the strategic asset allocation.

Upper Quartile: A statistical measure dividing a sample into four numerically equal groups. Thus, ‘upper quartile’ means the top 25% of a given sample.

Value Style: Asset managers who have a value style identify shares which trade below intrinsic value in the belief that the share price will return to its intrinsic value. These securities usually have low prices relative to book value or earnings.

Volatility: A measure used to define risk which refers to the degree of fluctuation of returns over a specified period (normally short-term). The higher the volatility, the higher the fluctuation of returns which is associated with greater uncertainty of expected returns. This scenario is defined as being high risk.

6. Appendix A

The following table represents some salary replacement ratios:

Assumed Investment Return for 30 years before retirement (after fees)	Assumed NET contribution towards retirement i.e. AFTER all costs for risk and administration etc (as % of pensionable salary)				
	8%	10%	12%	14%	16%
CPI + 5%	47%	59%	70%	82%	94%
CPI + 4%	39%	49%	59%	69%	79%
CPI + 3%	33%	42%	50%	58%	67%
CPI + 2%	28%	35%	42%	50%	57%

The Trustees consider an appropriate post retirement income to be 60% of pre-retirement pensionable income after 30 years of service (assuming that 2% accumulates for each year of service). This ratio is defined as the salary replacement ratio. The above table shows a range of ratios for various net retirement funding contribution rates in relation to real investment returns, assuming retirement at age 60. Other assumptions are:

Pre-retirement:

- **Real rate of return before retirement is dependent on the investment portfolio chosen;**
- Salaries are assumed to increase in line with price inflation. In order to assess the impact of a salary increase of 1.0% per annum above inflation, one needs to look at a 1.0% per annum lower real return (e.g. if the targeted real rate of return on the selected investment portfolio is CPI + 4% then one needs to look at the results of CPI + 3% in the above table to see the salary replacement ratio if salaries increase 1.0% per annum above price inflation);
- No break in service or 100% preservation of accumulated fund credit where there is a change of employer;
- Full fund credit available on retirement (one-third and two-thirds) is used to generate the pension;
- Effect of tax is not taken into account.

Post retirement

- Single life with-profit annuity is purchased at age 60 years;
- Allowance for future pension increases is approximately 2/3rds of price inflation.
